

## Same Day UTI Evaluation

We at Urology Associates understand that you may occasionally have the sudden onset of UTI type symptoms. These may include urgency, frequency and pain of urination, back or pelvic pain, and/or blood in your urine. You may also have atypical signs of infection associated with fever, confusion, or abdominal pain. Alternatively, you may also be asked to drop off a sample for a test of cure after a UTI or before a procedure. We are dedicated to helping you when these symptoms or situations arise.

It is important that if these symptoms or situations occur during business hours, that you call your Urology Care team at the extension listed on your care card x\_\_\_\_\_ or the Triage team at x\_\_\_\_\_. If you can not wait for business hours and choose to go to Urgent Care, please ask that they send a urine **culture**. You will be asked to obtain copies of the urine culture to bring with you to your next Urology Associates appointment so that we may better understand your infections and treat you.

The Same Day UTI appointment will be a brief visit, likely with an Advanced Practice Provider. The intent is to quickly evaluate and treat you should that be indicated based on your symptoms and urinalysis. You will be given a form to fill out to pinpoint your symptoms. Please save all other urologic concerns for your next appointment with your primary team. You will be offered a follow up appointment with your team within 2 weeks if needed or desired.

Thank you for reading and complying with the Same Day UTI care pathway. Please call your care team if you have any questions. We look forward to helping you with all of your urologic needs.
